

## Benefits of Becoming an NPU Efficiency Partner

The more you save on your utility bill, the more money you have in your pocket. The cost savings realized from taking steps to improve energy efficiency at your home or business adds to your bottom line.

Becoming energy efficient -- by reducing your energy consumption -- has positive environmental and economic impacts both locally and regionally.

## Partner with NPU Early... and FIRST!

Our customer efficiency services are ✓ provided at **no cost**<sup>1</sup>!

We have the technical expertise to assist you in the planning and implementation of a program that works best for you, ✓ so you don't lose out on savings or aesthetics.

We are local and available -- we'll be ✓ here as you plan your project, and we'll be here long after it's in place!

Avoid costly mistakes! Call us before making any decisions on equipment ✓ purchases. We will review your selections and advise you on what equipment is most efficient or may qualify for incentives.

<sup>1</sup> Paid from the NPU Energy Efficiency Fund

## Renewable Energy Programs

Efficiency programs are just the beginning. We are always exploring new programs and options to offer our customers to offset increasing energy prices.

Sustainable programs, such as renewable energy or co-generation, will become increasingly important as energy demand grows and technology costs decrease.

# Energy Efficiency Programs

## Sustainable Business Programs

NPU offers programs uniquely designed for our commercial customers. We don't believe in a "one size fits all" approach. Instead, each program is customized for the size and nature of the business, starting with a **free** energy analysis of your facility.

Types of programs offered to commercial customers include incentives and/or rebates for:

- ★ Lighting Retrofits (includes free CFLs)
- ★ Refrigeration and Process Equipment
- ★ HVAC Upgrade
- ★ A/C, Motors & VFDs
- ★ New Construction

Successful energy management can help save on the cost of doing business in the short-term and become part of your overall business strategy. Managing your building more efficiently by installing high efficiency lighting and other major upgrades, utilizing the 0% loan program will provide long-term savings and a significant return on your investment.

## 0% Interest Loan Program

NPU partners with 7 lending institutions to offer commercial and industrial customers an opportunity to finance energy efficiency upgrades with 0% interest loans.

Community Economic Development Fund

Eligible energy efficiency projects can be financed for up to 7 years. NPU pays the interest on your behalf directly to your lender. Best of all, the money you save on your utility bill by making these upgrades will pay for the project, eliminating the need to use capital funds!

## New Construction Program

We understand the importance of doing things right the first time -- that's why we created a New Construction Program to offer rebates and incentives to building contractors. Call us for more details.

## Residential Programs

We want to help you save money, and conserve energy, by making your home more energy efficient. We offer the following programs to our residential customers:

NPU's Home Energy Savings (HES) weatherization program is key to saving energy in your home -- and it's free! Our technicians will come to your home to:

- ★ Conduct a blower door test to identify air leaks in your home, and eliminate many sources of those leaks, where applicable.
- ★ Replace incandescent light bulbs with new compact fluorescent light bulbs (CFLs).
- ★ Install low-flow shower heads, sink aerators and pipe wrapping.
- ★ Conduct a general inspection of your home's energy usage and make customized suggestions on additional ways you can save energy!

NPU provides rebates on Energy Star qualifying washing machines, freezers, window air conditioners, refrigerators, and electric water heaters.

Rebates are also available for high efficiency natural gas heating and central air cooling equipment.

NPU also offers rebates for attic insulation for qualifying homes (HES analysis required prior to installation.)
